

Aluminum Oxide Flap Wheel Abrasive Tool

Aluminum oxide flap wheels are abrasive tools for grinding, blending, and finishing. Their flexible design allows them to conform to contoured surfaces, providing consistent abrasion for metalworking and woodworking.

Product Overview

Versatile Abrasive Solution

Aluminum oxide flap wheels are essential abrasive tools designed for efficient grinding, blending, and finishing tasks. Featuring multiple abrasive flaps arranged radially around a central core, these tools offer a flexible design that conforms perfectly to contoured surfaces. They are ideal for metalworking and woodworking applications, ensuring consistent material removal, deburring, and surface preparation for subsequent coating or painting.

Technical Specifications

Abrasive Material	Aluminum Oxide
Design Features	Radial Flap Arrangement, Flexible Design, Contour Conforming

Applications

Primary Applications

- Metalworking
- Woodworking
- Deburring
- Surface Smoothing
- Coating Preparation
