Product Overview

Automotive Sunroof Wind Deflector Rod

This aluminum sunroof wind deflector rod is engineered to reduce wind noise and turbulence when your vehicle's sunroof is open, significantly enhancing the driving experience. Constructed from lightweight yet durable aluminum, the rod is designed for longevity and resistance to environmental factors. It features a precise, bent, U-shaped structure with integrated mounting hardware, ensuring a secure fit and straightforward installation for various vehicle models.

Manufacturing Process

Production Workflow

- Extrusion molding
- Sawing to specific length
- Machining (90-degree bending, forming, and drilling)
- Aging
- Anodizing

Technical Details

Primary Function

Wind noise reduction • Turbulence reduction

Material

Aluminum

Design Features

U-shaped structure, Lightweight, Corrosion Resistant, Integrated mounting hardware
