

Amplified Subwoofer Speaker System

This amplified subwoofer speaker system is designed for high-performance audio reproduction. It features a large-diameter subwoofer driver housed in a robust enclosure, delivering deep and powerful bass response.

Product Overview

High-Performance Bass Solution

This amplified subwoofer speaker system is engineered to deliver powerful and precise low-frequency reproduction for professional and home environments. Equipped with an integrated high-output amplifier, it ensures consistent audio performance across a variety of demanding applications. Its versatile connectivity and adjustable control interface make it a reliable choice for home theater, studio monitoring, and live sound setups.

Technical Specifications

Design Type	Amplified Subwoofer System
Build Quality	Robust protective enclosure

Connectivity & Control

Adjustable Parameters

- Volume control
- Crossover frequency adjustment
- Precision sound tuning

Connectivity	Versatile Input/Output, Multiple Audio Sources
