Product Overview

Industrial Grade Analog Thermometer

This high-precision bimetallic thermometer is designed for reliable temperature monitoring in demanding industrial environments. Featuring a robust metallic housing and a clear, easy-to-read analog dial, it ensures consistent performance for critical applications. The device is suitable for a wide range of uses, including process control, HVAC systems, and laboratory settings.

Technical Specifications

Temperature Range

0 °C

Minimum

120 °C

Maximum

Suitable Applications

- Process Control
- HVAC Systems
- Laboratory Use
- Pipeline Monitoring
- Tank Temperature Control

Installation Features

- Robust sensing probe
- Threaded connection
- Direct immersion capability

Construction Materials

Metallic Housing, Brass Components
