

Angle Type Fire Hydrant Valve

Angle type fire hydrant valves are designed for fire suppression systems. These valves feature a flanged base for secure mounting, a handwheel for manual operation, and a threaded outlet for hose connection.

Overview

Angle Type Fire Hydrant Valve

This angle type fire hydrant valve is engineered for reliable performance in fire suppression systems. Featuring a robust construction with a flanged base for secure mounting and a manual handwheel for easy operation, it ensures efficient water flow control. The unit is finished in a high-visibility red coating and meets industry standards for pressure rating and flow capacity.
