

# Anti-Submarine Warfare Helicopter

This anti-submarine warfare (ASW) helicopter has advanced radar systems, sonar capabilities, and torpedo launch systems for maritime patrol and combat. Its compact design enables deployment from naval vessels and features a robust avionics suite for all-weather performance.

## Overview

### Versatile ASW Platform

The Z9EC is a highly capable 4-ton-class light ship-borne anti-submarine warfare helicopter designed for modern naval operations. Powered by dual ARRIEL2C engines, it integrates advanced dipping sonar, searching radar, and torpedo deployment capabilities into a single compact platform. Its airframe utilizes lightweight composite materials with specialized moisture and corrosion resistance, ensuring high performance and reliability in demanding maritime environments.

## Technical Specifications

Engine Type	2 x ARRIEL2C
Platform Class	4 ton

## Operational Capabilities

Armament	<ul style="list-style-type: none"><li>ET-52C Torpedo</li></ul>
Mission Profiles	Anti-Submarine Warfare, Search and Rescue, Maritime Surveillance

## Key Features

### Design Advantages

Composite Airframe • Corrosion Resistant • Ship-borne Compatible • Low Operating Cost

### Integrated Systems

- Dipping Sonar System
- Searching Radar
- Harpoon Landing System
