

Appliance Filter Element

This filter element is designed for use in various household appliances. It features a dense, porous material within a circular plastic frame for filtration.

Product Overview

High-Efficiency Filtration

This appliance filter element is engineered for optimal filtration performance in household electrical appliances. Its design features a dense, porous material housed within a durable circular plastic frame, ensuring effective capture of particles. This component is specifically compatible with the DCF-25 model, maintaining the operational integrity and air quality of your equipment.

Compatibility

Compatible Models

- DCF-25

Design & Construction

Shape	Round
Component Type	Filter Element
Material Features	Dense, Porous
