

Architectural Glass and Metal Facade System

This system is designed for large, modern architectural buildings. It features a hollow center and a complex network of intersecting lines and geometric patterns forming its facade.

Product Overview

Architectural Facade System

This high-performance architectural glass and metal facade system is designed to provide both structural integrity and aesthetic appeal for modern building projects. Featuring a complex network of geometric patterns, the system offers a sophisticated visual impact while maintaining durability in urban environments. It is engineered for large-scale applications, seamlessly integrating glass and metal components to create striking, frame-like structural designs.

Technical Specifications

Design Features

- Geometric pattern integration
- Complex structural framework
- High-transparency glass elements
- Modern aesthetic finish

Application Suitability

Commercial Buildings • Modern Urban Infrastructure • High-Rise Facades

Material Composition

Architectural Glass, Structural Metal
