Product Overview

Asphalt Anticorrosive Steel Pipe

This asphalt-coated steel pipe is engineered specifically for demanding underground pipeline applications. It features a robust steel core protected by a multi-layered asphalt coating, creating a highly effective barrier against corrosion from soil, water, and chemical exposure. Designed for durability and long-term performance, this solution is suitable for critical infrastructure projects, including oil and gas transport, water distribution, and sewage systems.

Technical Specifications

Nominal Diameter	1750 mm
Wall Thickness	8.7 mm
Coating Type	Multi-layered Asphalt Anticorrosive

Applications

Resistance Properties

Soil Corrosion Resistant • Waterproof • Chemical Resistant

Primary Industries	Oil and Gas, Water Distribution, Sewage Systems, Underground Infrastructure
