

Astronomical Telescope with Tripod

This optical telescope is designed for astronomical observations. It features a sturdy tripod mount for stable viewing, a primary lens for light gathering, and an eyepiece for magnification.

Product Overview

Professional Astronomical Telescope

This high-performance astronomical telescope is engineered for clear and precise celestial observations. Featuring a robust tripod mount, it ensures maximum stability during extended viewing sessions of planets, stars, and nebulae. Equipped with a high-quality primary lens for superior light gathering, this system is an ideal choice for serious hobbyists and professional sky watchers alike.

Technical Features

Key Components

- Primary lens for advanced light gathering
- High-precision eyepiece for magnification
- Integrated finderscope for object alignment
- Sturdy tripod base for stable viewing

Mount Stability

Professional Grade • Stable Tripod

Recommended Observations

Planetary viewing, Deep sky objects, Nebulae, Stellar observation
