

Atmospheric Water Generator for Home or Office

This atmospheric water generator extracts water from ambient air humidity using condensation. Designed for home or office use, it provides a sustainable drinking water source.

Product Overview

Sustainable Atmospheric Water Generation

This atmospheric water generator is an innovative solution for homes and offices, extracting potable water directly from ambient humidity. By leveraging efficient condensation technology, it provides a consistent and sustainable supply of drinking water without the need for external water lines. The unit is designed for simple operation and integrates easily into various indoor environments.

Technical Specifications

Operating Conditions

Parameter	Range
Temperature	15-40°C
Humidity	35%-95%

Power Allocation

- Heating: 500W
- Cooling: 380W

Power Voltage 220V/50Hz or 110V/60Hz

Total Power Consumption 950 W

Performance Metrics

Key Performance Indicators

15 L/day

Daily Production

8.8 L

Storage Capacity

Physical Attributes

Physical Dimensions 45 x 43 x 66 cm
