

Automated Cake Production Line

This automated cake production line is designed for continuous operation. It features stainless steel construction with conveyor belts, dispensing mechanisms, and shaping components.

ADDITIONAL IMAGES

Product Overview

Industrial-Grade Automated Manufacturing

This automated cake production line is engineered for continuous, high-volume manufacturing environments. Constructed with durable stainless steel, it ensures optimal hygiene standards and long-term operational reliability. The system integrates essential components including conveyor belts, precise dispensing mechanisms, and shaping modules to streamline the entire production process.

Production Capabilities

Cake Production, Fenpi Production, Rice Noodle Production, Noodles Production

Technical Specifications

Key Components

- Conveyor belts
- Dispensing mechanisms
- Shaping components
- Mixing tanks
- Processing tanks
- Integrated piping systems

Operational Suitability

High-Volume Production • Continuous Operation • Customizable

Material

Stainless Steel
