

Automated Glass and Ceramic Processing Machine

This automated machine is designed for glass and ceramics manufacturing. It utilizes a rotating carousel with precision tools for shaping, cutting, and finishing glass and ceramic components, along with pneumatic and hydraulic controls for repeatable operations.

Overview

Precision Automated Processing

This automated processing machine is engineered specifically for high-volume glass and ceramic manufacturing. It utilizes a sophisticated rotating carousel design with multiple dedicated work stations to ensure seamless production flow. Equipped with advanced pneumatic and hydraulic control systems, the machine delivers consistent, repeatable precision for complex shaping, cutting, and finishing tasks.

Technical Specifications

Control Systems

- Pneumatic Controls
- Hydraulic Controls

Production Capacity

High-Volume Ready • Precision Tooling

System Design

Rotating Carousel, Multi-Station, Automated
