

Automated Industrial Cleaning Machine with Conveyor System

This automated cleaning machine is designed for industrial applications. It features a conveyor belt system for transporting items through various cleaning stages and includes multiple cleaning heads and a stainless steel construction.

Overview

Automated Industrial Cleaning Solution

This automated cleaning machine is engineered for high-volume industrial applications, featuring an integrated conveyor belt system that transports items seamlessly through multiple cleaning stages. Constructed from durable stainless steel, it ensures long-term reliability and strict hygiene standards in controlled environments. It is specifically designed to optimize efficiency for the cleaning of small items at scale.

Technical Specifications

Construction Material	Stainless Steel
Cleaning Mechanism	Multi-stage conveyor system with multiple cleaning heads
Application Type	Industrial, High-volume, Automated

Performance

Operational Environment
Controlled Environment

Target Items

- Small items
