

Automated Metal Cutting and Bending Machine

This shearing machine is designed for automated cutting, folding, and bending of sheet metal. It features a programmable control system and robust construction for producing complex shapes.

Overview

Automated Metal Fabrication Solution

This high-precision machine integrates cutting, folding, and bending capabilities into a single automated system designed for efficient metal forming. Built with robust construction for demanding industrial environments, it features a programmable control system that ensures accuracy and repeatability. The system is engineered to produce complex shapes and profiles from sheet metal while minimizing material waste, making it an ideal choice for high-volume production lines.

Key Features

Core Capabilities

- Automated metal cutting
- Automated metal folding
- Automated metal bending
- Programmable control system

Operational Benefits

High Precision, Minimal Waste, Industrial Grade, Programmable

Safety & Standards

Safety Mechanisms

Yes
