

Automated Oxidation Line for Mobile Phone Components

This automated oxidation line is designed for mobile phone components. The multi-stage process ensures consistent and uniform oxidation, enhancing surface finish and protection.

Product Overview

Automated Oxidation Line

This automated oxidation line is engineered specifically for the high-volume production of mobile phone components. Featuring a sophisticated multi-stage conveyor system, the equipment ensures consistent and uniform surface treatment across all parts. The integrated multi-tank design facilitates a precise chemical process, providing durable surface protection and a high-quality finish essential for modern mobile device manufacturing.

System Capabilities

Process Type

Automated • Oxidation • Multi-stage

Handling Method

Conveyor system with hanging part fixtures

Application

Mobile phone components

Technical Features

Treatment Stations

5 tanks

Production Scale

High-volume
