

Automated Spiral Tube Forming Machine

This spiral tubeformer is engineered for the automated production of spiral-wound tubes. It forms tubes from materials such as steel and aluminum, ensuring precise dimensions and consistent quality.

Product Overview

Automated Spiral Tube Forming System

This high-performance spiral tubeformer is engineered for the automated, high-precision production of spiral-wound tubes. Designed for industrial applications, it reliably processes materials such as steel and aluminum to ensure consistent dimensional quality. With a robust frame and integrated welding capabilities, it provides an efficient solution for manufacturing ductwork and HVAC components.

Technical Capabilities

Industrial Applications

- HVAC systems
- Ventilation ducts
- General industrial tube fabrication

Compatible Materials

Steel, Aluminum

Production Type

Automated spiral-wound tube forming

Construction

Frame Construction

Robust heavy-duty industrial frame

Welding System

Yes

Control System

Advanced digital control system
