

Automatic Bag Forming and Sealing Machine

This automatic packaging machine is designed for efficient, high-volume production of bags and pouches from roll stock material. The machine integrates unwinding, sealing, cutting, and stacking stations for consistent and reliable performance.

Overview

High-Efficiency Bag Forming and Sealing

This automatic packaging machine is engineered for high-volume production, transforming roll stock material into finished bags and pouches with precision. Built with a robust frame and an advanced control system, it streamlines the unwinding, sealing, cutting, and stacking process. It is an ideal solution for diverse packaging applications requiring consistent, automated performance.

Technical Specifications

Automation Level

Fully Automatic

Core Functions

- Material Unwinding
- Precision Sealing
- Cutting
- Stacking

Construction

Robust frame design for industrial stability

Control System

Advanced parameter adjustment panel
