

Automatic Bottle Washing Filling and Capping Machine

This automatic machine integrates bottle washing, filling, and capping functions. It is designed for large water bottles, ensuring hygiene and efficiency in high-volume production lines.

Overview

High-Efficiency Packaging Solution

This automatic bottle washing, filling, and capping machine is engineered for high-volume production environments, specifically for large water bottles. Its robust stainless steel construction ensures durability and adherence to strict hygiene standards. By integrating multiple washing stages with precise filling and secure capping mechanisms, it optimizes the packaging workflow for maximum efficiency.

Technical Specifications

Construction Material	Stainless Steel
Application	Large Water Bottles, High-Volume Production

Key Features

Process Capabilities

- Multi-stage bottle washing
- Precise filling mechanism
- Secure capping system

Performance

Operational Focus

Hygiene • Efficiency • Automation
