

Automatic Bottling Line

This automatic bottling line is designed for filling, washing, and capping bottles. The integrated system streamlines bottling, ensuring hygiene and efficiency for liquids like water, juice, and carbonated drinks.

Overview

High-Efficiency Bottling Solution

This automatic bottling line is an integrated system designed specifically for the food and beverage industry. It streamlines the entire bottling process, including washing, precise filling, and secure capping. Constructed with durable stainless steel, the machine ensures high hygiene standards and operational efficiency for various liquids such as water, juice, and carbonated drinks.

Technical Specifications

Material

Stainless Steel

Model Identifier

SGF24-24-8

Capabilities

Core Functions

- Automated Bottle Washing
- Precise Liquid Filling
- Secure Bottle Capping

Suitable Applications

Water, Juice, Carbonated Drinks
