

Automatic Circulator Pump for Fluid Circulation

These automatic circulator pumps are engineered for efficient fluid circulation in diverse applications. They come in models with different pipe sizes, power ratings, and flow rates to suit specific performance requirements.

Overview

High-Efficiency Automatic Circulator Pumps

The LPS/LRS/LPA series automatic circulator pumps are engineered for reliable fluid circulation across a variety of residential and commercial systems. These units are available in a range of configurations to suit specific flow and pressure requirements, featuring robust construction and versatile pipe connection options. With power ratings ranging from 100W to 260W and maximum flow rates up to 60 L/min, these pumps provide consistent performance for demanding circulation tasks.

Certifications

Quality & Compliance

ISO 9001, ISO 14001, CE
