

Automatic Hydraulic Concrete Block Making Machine

This fully automatic hydraulic block making machine is designed for high-volume production of concrete blocks, pavers, and bricks. It features an advanced control system and automatic material processing for efficient and reliable performance.

Product Overview

High-Performance Concrete Block Manufacturing

The QT8-15 is a fully automatic hydraulic machine engineered for high-volume production of concrete blocks, pavers, and bricks. Featuring an advanced control system, it ensures precise operation, consistent quality, and efficient material handling. Its powerful hydraulic system delivers high pressing force, resulting in dense, durable concrete products suitable for large-scale construction projects.

Technical Capabilities

Automation Features

- Automatic material feeding
- Automatic mixing process
- Automatic molding process

Performance Highlights

8 Blocks/Cycle

Production Cycle Efficiency
