

Automatic Multi-Point Shaft Straightening Machine

This machine improves efficiency using servo and transmission technology. It achieves high straightening precision, up to 0.01mm, through an advanced control system, visual technology, and robotics.

Overview

High-Precision Shaft Straightening

This multi-point fully automatic shaft straightening machine is engineered for high-precision alignment tasks across various industrial sectors. It features a robust frame construction combined with an advanced control system to ensure consistent, reliable performance. Designed for efficiency, the machine utilizes multiple straightening points and an intuitive user interface to streamline programming and monitoring processes.

Key Features

Machine Capabilities

- Fully automatic operation
- Multi-point straightening system
- High-precision alignment
- Robust frame construction

Safety & Control

Safety Features

Protective Cage, Emergency Stop

Control System

Advanced control system with user-friendly interface
