

Automatic Paper Bag Making Machine

This automatic paper bag making machine produces various types of paper bags. It is constructed with durable materials for reliable and continuous operation in high-volume production environments, and features a control panel for parameter adjustments.

Overview

High-Efficiency Paper Bag Production

This automatic paper bag making machine is engineered for high-volume, reliable production of various paper bag types. It features an integrated control panel for precise parameter adjustment and real-time monitoring of the production process. Built with durable materials, the system ensures consistent operation from the paper roll feeding stage through to the final bag collection unit.

Technical Specifications

Model Identifier	JCO 850
Machine Type	Automatic Paper Bag Making Machine

Key Features

Core System Components

- Paper roll feeding system
- Precision bag forming section
- Automated collection unit
- Integrated control panel

Operational Capabilities	High-volume production, Continuous operation, Adjustable parameters, Process monitoring
--------------------------	---
