

Automatic Plastic Bag Making Machine

This automatic packaging machine is designed for high-speed production of plastic bags. It features film unwinding, sealing, cutting, and conveying mechanisms.

Overview

High-Efficiency Bag Production

This automatic packaging machine is engineered for high-speed, reliable production of plastic bags. It integrates essential mechanisms including film unwinding, precision sealing, cutting, and conveying into a single streamlined process. Designed for versatility, it is suitable for manufacturing various bag types from polyethylene and similar materials, making it a robust solution for diverse packaging needs.

Technical Specifications

Core Features

- Automatic film unwinding
- Precision sealing system
- Integrated cutting mechanism
- Conveying system

Compatible Materials

Polyethylene, Plastic Film

Control & Safety

Control System

Electronic Controls • Adjustable Speed • Temperature Control

Safety Standards

Yes

Construction

Robust heavy-duty frame
