

Automatic Straight Seam Welding Machine

This automatic welding machine is generally used for stainless steel butt plate and solar water tank applications. It is designed to create straight seams with precision.

Product Overview

Automatic Straight Seam Welding Machine

This automatic straight seam welding machine is engineered for precision and consistency in manufacturing environments. Featuring a robust frame and a linear track-mounted welding head, it ensures repeatable, high-quality results across various material applications. The self-contained system integrates all necessary controls and power supply, making it an efficient solution for automated production lines requiring long, straight welds.

Technical Specifications

Welding Method	Automatic Straight Seam
Operation Mode	Automatic, Linear Motion

Key Features

System Highlights

- Robust frame construction for stability
- Precision linear track guidance
- Integrated power supply
- Onboard control interface
