

Automatic Tilting Industrial Washing Machine

This automatic industrial washing machine is designed for heavy-duty laundry applications. It features a tilting mechanism for easy loading and unloading of materials.

Product Overview

Industrial Efficiency & Automation

This automatic tilting industrial washing machine is engineered for high-volume laundry applications requiring consistent performance and durability. Featuring an intuitive programmable microcomputer control system, it offers seamless automation across all washing, disinfection, bleaching, and dehydration cycles. Its robust, vibration-absorbing suspended structure and tilting discharge mechanism simplify loading and unloading processes while ensuring reliable, heavy-duty operation.

Technical Features

Control System	Programmable microcomputer with dot matrix LCD
Drive System	Variable frequency drive
Damping System	Suspended structure vibration absorber
Valve Technology	Pneumatic control for rapid and reliable action

Operational Capabilities

Dehydration Speeds	4
Discharge System	Automatic tilt

Construction

Material	Quality Stainless Steel, Corrosion Resistant
Drainage Design	Double tube structure for rapid, pollution-free drainage
