

Automatic Water Bottling Line

This automatic bottling machine is designed for filling and capping pure water into PET bottles. The machine integrates rinsing, filling, and capping functions into one unit, ensuring efficient and sanitary production.

Overview

Integrated Water Bottling Solution

This automatic bottling line offers a seamless, all-in-one solution for rinsing, filling, and capping PET bottles. Designed for high-speed performance and strict hygiene, the system utilizes robust stainless steel construction to ensure durability and sanitation. With an intuitive PLC-based control interface, operators can precisely calibrate filling volumes and capping pressures to meet diverse production needs.

Performance Metrics

Core Functional Features

- Automatic rinsing, filling, and capping integration
- PLC-based precision control system
- Multi-head filling for high-speed throughput
- Adjustable settings for multiple bottle sizes and shapes

Safety & Compliance

Safety Equipment	Emergency Stop Buttons, Protective Enclosures
------------------	---

Technical Specifications

Construction Material	Stainless Steel
Capping Mechanism	Yes
