

Automatic Water Pressure Booster Pump

This automatic water pump is designed for residential and light commercial applications. It features durable construction and provides consistent water pressure for boosting water pressure in homes, gardens, and small irrigation systems.

Overview

Reliable Water Pressure Solution

This automatic water pressure booster pump is designed for efficiency and ease of use, making it ideal for both domestic and industrial applications. It is engineered to handle clean water effectively without the need for chemically aggressive fluids. With a compact and economical design, it provides consistent water supply for systems like air conditioning, refrigeration, and garden irrigation.

Technical Specifications

Maximum Suction Depth	9 m
Model	MQS-126 (AUTO)
Key Features	Automatic Operation, Compact Design, Economical, Reliable
Suction Valve	Integrated check valve (no foot valve required)

Applications

Primary Applications

- Domestic water supply
- Industrial water systems
- Air conditioner recirculation
- Refrigerator cooling systems
- Garden watering
- Surge tank distribution
- Well water lifting

Fluid Compatibility

Clean Water • Non-abrasive • Non-aggressive
