

Automatic Water Pressure Booster System

This automatic water pressure booster system is designed for residential and light commercial applications. It features a stainless steel pressure tank, a self-priming jet pump, and an integrated pressure switch for automatic operation.

Product Overview

Automatic Water Pressure Booster System

This automatic water pressure booster system is engineered to maintain consistent water pressure for residential and light commercial applications. Featuring a robust stainless steel pressure tank and a self-priming jet pump, it ensures reliable performance for showers, faucets, and irrigation systems. Designed for easy installation and quiet operation, it is an ideal solution for boosting pressure from wells, tanks, or municipal water supplies.

Technical Specifications

Key Components

- Stainless steel pressure tank
- Self-priming jet pump
- Integrated pressure switch

Key Features

Automatic Operation • Corrosion-Resistant • Quiet Operation • Easy Installation

Suitable Applications

Residential, Light Commercial, Well Water, Tank Supply, Municipal Supply
