Product Overview

Intelligent Water Pump Control

This automatic water pump pressure controller is designed to optimize water piping systems by automating pump operation. It detects pressure drops when taps are opened to start the pump and stops it when flow ceases, replacing complex traditional systems like five-way connectors and pressure tanks. The unit also features an automatic shut-off function during water shortages, ensuring system protection and reliability for both drinking and non-potable water applications.

Technical Specifications

Starting Pressure Options

- 1.5 bar
- 2.2 bar

IP Rating

IP65

Rated Voltage

220-240V

Rated Current

10 A

Maximum Pressure

10 bar

Connector Size

G1"

Key Features

System Capabilities

Automatic Start/Stop, Dry Run Protection, Integrated Pressure Gauge, Easy Installation, Maintenance Friendly

Customization & Accessories

Available Options

Category	Description
Appearance	Customizable product color
Cabling	Power or motor cable options
Connectors	R1" Plastic Quick Connector
Components	Electronic board / Plastic parts
