

Automatic Wire Straightening and Cutting Machine

This machine improves efficiency using servo and transmission technology. It achieves high precision, with straightening precision reaching 0.01mm.

Overview

High-Precision Automation Solution

This automatic wire straightening and cutting machine is designed to deliver high-performance and reliable processing for various industrial applications. By leveraging advanced technical capabilities, it ensures high-precision results for metal wire preparation. This equipment is engineered to enhance efficiency in metal forming processes, meeting the rigorous demands of modern manufacturing environments.

Technical Specifications

Force Range

50 KN

Minimum Force

800 KN

Maximum Force

Model Designation

JEM30

Capabilities

Core Functions

- Automatic wire straightening
- Automatic wire cutting
- High-precision metal forming

Suitable Industries

Metal Processing, Industrial Manufacturing, Wire Preparation
