

Automatic Wire Stripping Machine

This automatic wire stripping machine is designed for efficient and accurate processing of various wire types. It features a programmable control panel for setting stripping parameters, adjustable cutting depth, and a robust feeding mechanism to ensure consistent results.

Product Overview

Precision Industrial Wire Processing

The ZDBX-9 automatic wire stripping machine is an advanced solution engineered for high-precision wire preparation in industrial environments. It features a fully programmable control panel, allowing operators to fine-tune stripping parameters and cutting depths with extreme accuracy. Built for efficiency, the machine utilizes a robust feeding mechanism that ensures consistent, reliable performance even during high-volume production cycles.

Technical Specifications

Operation Mode

Automatic • Programmable

Primary Features

- Programmable control panel
- Adjustable cutting depth
- Robust feeding mechanism
- High-precision wire processing

Performance Metrics

Ideal Use Case

Industrial Use, High-Volume Processing
