Product Overview

High-Efficiency Bead Manufacturing Solution

This automated woodworking system is engineered for the precision shaping and finishing of wooden beads. Combining robust construction with advanced sanding and polishing mechanisms, it ensures consistent output quality for industrial bead manufacturing. The system features integrated digital controls for speed adjustment, making it a reliable solution for professional woodworking workshops.

Technical Specifications

Control Features

- Adjustable speed control
- Digital display interface
- Multi-tier rotating mechanism

Core Functions

Bead Shaping, Automatic Sanding, Polishing

Build Quality

Robust black metal frame construction with integrated headstock and tailstock assembly.
