

Automotive and Marine Battery Charger

This battery charger is fully automatic and designed for automotive and marine applications. Multiple charging modes optimize charging for various battery types and sizes, including lead-acid, gel, and AGM batteries.

Overview

Professional Battery Charging Solution

The START 55 is a fully automatic battery charger engineered specifically for automotive and marine environments. It utilizes advanced charging modes to optimize performance across various battery types and sizes, ensuring longevity and efficiency. With built-in safety features including protection against overcharging, short circuits, and reverse polarity, it provides a reliable and secure charging process for professional applications.

Technical Specifications

Safety Features

- Overcharge protection
- Short circuit protection
- Reverse polarity protection

Operation Mode

Fully Automatic

Supported Battery Types

Lead-acid, Gel, AGM

Primary Applications

Automotive, Marine
