

Automotive Audio Amplifier with Heat Sink

This is a high-performance auto amplifier with a robust heat sink design for efficient thermal management. It is equipped with multiple input and output terminals for versatile connectivity.

Overview

High-Performance Automotive Audio Solution

This automotive audio amplifier is engineered for high-performance sound systems, featuring a robust heat sink design that ensures efficient thermal management during extended operation. Its compact and durable construction is specifically built to withstand the demanding conditions of automotive environments. Equipped with multiple input and output terminals, it offers versatile connectivity options for various audio setups.

Technical Specifications

Thermal Management

Integrated Heat Sink • Efficient Cooling

Connectivity

Multi-Input, Multi-Output, Versatile Terminals

Design & Build

Construction

Compact and Durable

Application

Automotive
