

Automotive Battery

This is an automotive battery. It is likely a 12V battery designed for starting, lighting, and ignition (SLI) systems in vehicles.

Overview

Reliable Automotive Power Solution

This automotive battery is engineered for consistent performance in standard starting, lighting, and ignition (SLI) systems. Designed with a robust lead-acid construction, it provides the necessary power for reliable vehicle startups. The compact design includes an integrated carrying handle for convenient handling and installation.

Technical Specifications

Key Features

- Standard lead-acid construction
- Integrated carrying handle
- Standard terminal configuration

Voltage	12 V
Capacity	34 AH
Application	SLI, Automotive
