

Automotive CAS4 BDM Programmer

This tool programs the CAS4 immobilizer system in BMW vehicles. It reads and writes chip data and supports the new 2009 7 Series (F01/F02) CAS4 odometer and chips.

Product Overview

Professional Immobilizer Programming Tool

The R270 BDM Programmer is a specialized diagnostic and programming tool designed for advanced automotive tasks, including BMW CAS4 odometer adjustments and chip data management. It features efficient, secure read/write capabilities for various MCU series, including HC908 and HC9S12. This versatile device supports a wide array of automotive modules, making it an essential instrument for professional automotive technicians and locksmiths.

Supported Architectures

Supported MCU Series

- HC908
- HC912
- HC9S12
- HC9S12X

BMW System Compatibility

CAS, CAS4, EWS4

Module Coverage

Compatible Modules

- EIS
- CAS
- SRS
- ECU

M35080 Series Support

35080 • 35080-V6 • 35080-VP • D80 D0WQ • D160 • 35160
