

Automotive Ceramic Coating Kit

This ceramic coating kit is designed to provide lasting brightness and protection to vehicle surfaces. It includes a degreasing agent, protectant polish, and crystal coating to protect and strengthen the vehicle's paint.

Product Overview

Professional Grade Paint Protection

This advanced ceramic coating kit utilizes inorganic silicone dioxide technology to create a durable, mirror-like protective film on vehicle surfaces. Designed to withstand harsh environmental factors like UV radiation, acid rain, and chemical contaminants, this solution significantly improves paint hardness and simplifies maintenance. The kit provides a long-lasting, hydrophobic barrier that prevents oxidation and keeps vehicles looking pristine for up to three years.

Key Benefits

Protective Properties

Anti-Oxidation • UV Protection • Corrosion Resistant • Hydrophobic • Anti-Scratch

Application Guide

Application Process

- Clean surface thoroughly with degreasing agent
- Apply crystal coating to sponge
- Smear in cross-hatch pattern (50x50cm sections)
- Apply protectant agent
- Wait 2-5 minutes
- Wipe clean with microfiber towel

Curing Requirements

Requirement	Duration
Initial Dry Time	2 Hours
Car Wash Restriction	7 Days
