Product Overview

Automotive Flasher Unit

This automotive flasher unit is a critical electronic component engineered for reliable control of vehicle lighting systems. Designed specifically for truck applications, it manages the flashing rate of turn signals and hazard lights to ensure consistent safety signaling. Built with durable materials, it provides robust protection against the environmental and mechanical stresses typical of heavy-duty automotive environments.

Technical Details

Connector Configuration	6-pin connector
Pin Arrangement	Two-row configuration
Housing Material	Durable black plastic

Compatibility & Use

Primary Functions

- Turn signal control
- Hazard light management

Compatible Vehicle Type	Truck, Automotive
