

Automotive Fluid Reservoir

This reservoir is designed for storing fluids in automotive systems. It features a fill cap, mounting points, and a port for fluid connection.

General Overview

Automotive Fluid Reservoir

This durable fluid reservoir is designed for automotive applications, offering a robust metal construction to ensure longevity and reliability. It features a secure metallic cap and integrated mounting points for streamlined installation into vehicle or machinery systems. The unit includes a dedicated lower port for efficient fluid delivery, making it a dependable component for fluid management needs.

Physical Properties

Color

Red

Material

Painted Metal

Installation

Mounting Type

Bolt-on (Integrated Mounting Holes)

Interface

Metallic Cap, Lower Fluid Port
