

Automotive Gear Shifter Mechanism

This is an automotive gear shifter mechanism designed for gear selection. It is constructed with a black plastic frame and features various white and black plastic components.

Product Overview

Automotive Gear Shifter Mechanism

This automotive gear shifter mechanism is precision-engineered for reliable gear selection in automatic transmission vehicles. Featuring a robust black plastic frame and high-quality internal linkage components, it is designed for seamless integration into vehicle assemblies. This component offers professional-grade durability and performance, making it an ideal choice for maintenance, repair, or new automotive build projects.

Technical Specifications

Component Category

Replacement Part • OEM Specification • Drivetrain Component

Transmission Compatibility

Automatic

Materials

High-Grade Plastic, Reinforced Polymer, Internal Mechanical Linkages
