

Automotive Heater Core

This high-performance heater core is designed for efficient heat transfer and reliable performance in automotive heating systems. Its durable construction features tightly packed fins for maximum surface area and enhanced heat dissipation.

Product Overview

High-Performance Automotive Heater Core

This automotive heater core is engineered for efficient heat transfer and reliable operation within vehicle HVAC systems. Designed with a durable core construction, it features optimized fin density to maximize surface area for enhanced heat dissipation and cabin comfort. Built to meet or exceed OEM specifications, this unit ensures a precise fit and seamless integration for consistent heating performance in diverse driving conditions.

Technical Specifications

Core Dimensions

328 mm
Length

187 mm
Width

42 mm
Thickness

Cross-Reference Numbers

Reference Type	Value
Nissens	6272042

Compatibility

Vehicle Application	Mitsubishi, Otobus
