

Automotive Interior Component Mould Set

Mould set designed for creating automotive interior parts such as center consoles, air registers and instrument clusters. The high-grade materials and intricate internal structures ensure durability and consistent part production.

Overview

Precision Automotive Moulding Solutions

This high-precision mould set is engineered specifically for the automotive industry, enabling the production of complex interior components including center consoles, air registers, and instrument clusters. Designed for durability and consistent performance, the mould features optimized internal structures that facilitate efficient cooling and ejection cycles. It is built to meet rigorous manufacturing standards, ensuring high-quality output for demanding automotive plastic injection applications.

Technical Capabilities

Quality Standards

ISO 9001:2008

Compatible Components

Center Console, Air Register, Instrument Cluster

Performance Metrics

Design Focus

1 High

Cooling Cycle Optimization

1 High

Ejection Cycle Efficiency

Manufacturing Details

Manufacturing Expertise

- Plastic Injection Moulds
- Die Casting Moulds
- Precision Mould Spare Parts
- Die Parts
