

Automotive Lead-Acid Battery 75D23L

This automotive lead-acid battery is designed for starting, lighting, and ignition (SLI) applications. It features a maintenance-free design and robust construction for reliable performance.

Overview

Reliable Automotive Starting Power

The 75D23L is a high-performance automotive lead-acid battery engineered for starting, lighting, and ignition (SLI) applications. Its maintenance-free design ensures hassle-free operation while providing a stable 12V power source for a wide range of vehicles. Built with robust construction, this battery is designed to deliver consistent performance and reliable engine starts in various conditions.

Technical Specifications

Nominal Voltage	12 V
Model Designation	75D23L
Battery Type	Lead-Acid

Performance & Features

Maintenance Type
Maintenance-Free

Key Benefits

- Robust construction for durability
- Reliable starting performance
- Designed for 12V vehicle systems
- Maintenance-free operation

Primary Applications	Starting, Lighting, Ignition (SLI)
