

Automotive Muffler Housing

This muffler housing is engineered for optimal exhaust system performance. It is constructed from high-grade metal alloy for durability and heat resistance, ensuring efficient noise reduction and exhaust gas flow.

Product Overview

Precision-Engineered Muffler Housing

This muffler housing is engineered for optimal exhaust system performance and durability. Constructed from high-grade metal alloy, it offers superior heat resistance and efficient exhaust gas flow. Designed for automotive engine applications, it features threaded connections and multiple mounting flanges to ensure secure attachment and versatile installation.

Technical Specifications

Material	High-grade metal alloy (Aluminum alloy)
Key Features	Noise Reduction, Heat Resistant, Threaded Connections, Mounting Flanges, Optimized Exhaust Flow
Application	Automotive engine systems

Manufacturing Standards

Certifications

TS16949

Production Capabilities

- Die-casting
- Cold extrusion
- Ultra-precision CNC processing
- Assembly and testing

Annual Production Capacity

8000000 pcs

Pump Production
