Product Overview

High-Performance Steering Assistance

This automotive power steering pump is engineered to provide reliable hydraulic pressure, ensuring smooth and effortless vehicle handling. Constructed from durable steel, the unit is assembled using new components and rigorously tested to ensure optimal performance and operational longevity. It serves as a critical component for maintaining responsive steering control in various driving conditions.

Technical Specifications

Material	Steel
Net Weight	5.1 kg
Primary Function	Assist the driver in adjusting vehicle direction by providing hydraulic pressure

Quality Assurance

Quality Standards	New Components, Stand Tested, Precision Engineered
