

Automotive Rubber Bushing for Vibration Isolation

These rubber bushings are designed for automotive applications. They provide vibration isolation and reduce noise, contributing to a smoother driving experience.

Product Overview

Automotive Rubber Bushing

These rubber bushings are precision-engineered for automotive applications, specifically designed for integration into vehicle suspension and chassis systems. Their primary function is to provide effective vibration isolation and noise reduction, which significantly contributes to a smoother and quieter driving experience. Built for durability and performance, these components are essential for maintaining vehicle handling and ride comfort.

Technical Specifications

Key Features

- Vibration isolation
- Noise reduction
- Durable construction

Application Area

Suspension System, Chassis System

Part Reference

Compatible Part Numbers

Part Number
48815-30050
51306-504-N01
48815-12220
45517-42010
45517-35010
54445-0W000
