Product Overview

High-Performance Tire Protection

These automotive rubber tire flaps are engineered using a high-adhesive rubber compound to provide superior protection for inner tubes and tires. Designed to withstand harsh road conditions, they effectively guard against punctures, debris, and chafing, thereby extending the service life of your tires. Their resilient material offers excellent heat, oxidation, and ozone resistance, making them suitable for demanding driving environments.

Performance Metrics

3 multiplier

Relative Shelf Life

Material Characteristics

High-Adhesive Rubber, Aging Resistant, Heat Resistant, Oxidation Resistant, Ozone Resistant

Applications

Compatible Specifications

- 900-20
- 1000-20

Operational Suitability

Heavy-Duty Applications • High Temperature • Low Temperature
