

Automotive Shock Absorbers

High-performance shock absorbers are designed for automotive suspension systems. These hydraulic dampers minimize vibrations and provide a comfortable ride.

Product Overview

High-Performance Hydraulic Dampers

These automotive shock absorbers are engineered to significantly minimize vibrations and ensure a comfortable, smooth ride. Featuring durable construction and precise damping characteristics, they are designed to enhance overall vehicle stability and handling. These units are suitable for a wide range of automotive suspension applications.

Technical Specifications

Model Code	PD-0400
Series Identifier	C2 92

Key Features

Key Benefits

- Vibration minimization
- Enhanced vehicle stability
- Improved handling
- Durable construction

Damping Type

Hydraulic
